CS 150 Quiz 3 practice questions 2/24/20

4	T			
1.	True	Λr	⊢a.	ICPr
_ .	HUC	OI.	ıu	J .

 The literals	'abc'	and	"abc"	create identical strings in Python
 The followin	g literal	l 'ab	c\"d'	would generate a Python error

2. Evaluate the following expressions, writing the resulting string into the boxes, one character per box, and shading in unused boxes to indicate the end of the string. Assume the value of astring is "cs class". The first one is done for you as an example.

astring

ascring									
С	S		С	1	a	S	S		
astring	astring[1:4]								
astring	astring[0] + astring[-1]								
astring	astring[:4]								
astring[4:5]									
(astrino	(astring.upper())[4::2]								

3. [3 points] When run via the green arrow in Thonny what will the following code print?

```
s = "CSCI" + str(150)
s.lower()
for i in range(0,4):
    print(s[i] * 2)
```
