How can we evaluate visualizations?

What is the purpose of the visualization?

How well does it perform?

- Do the encodings make sense?

- Can you read the data out of it?

 - Does it highlight the important information?

- Can you see something interesting beyond the information?

- Is there interaction?

 - Is it useful?

- Is there an appropriate amount of information represented?

 - Enough to be useful, not enough to be confusing?

- Is it honest?

Is it aesthetic?

- Does it invite exploration?

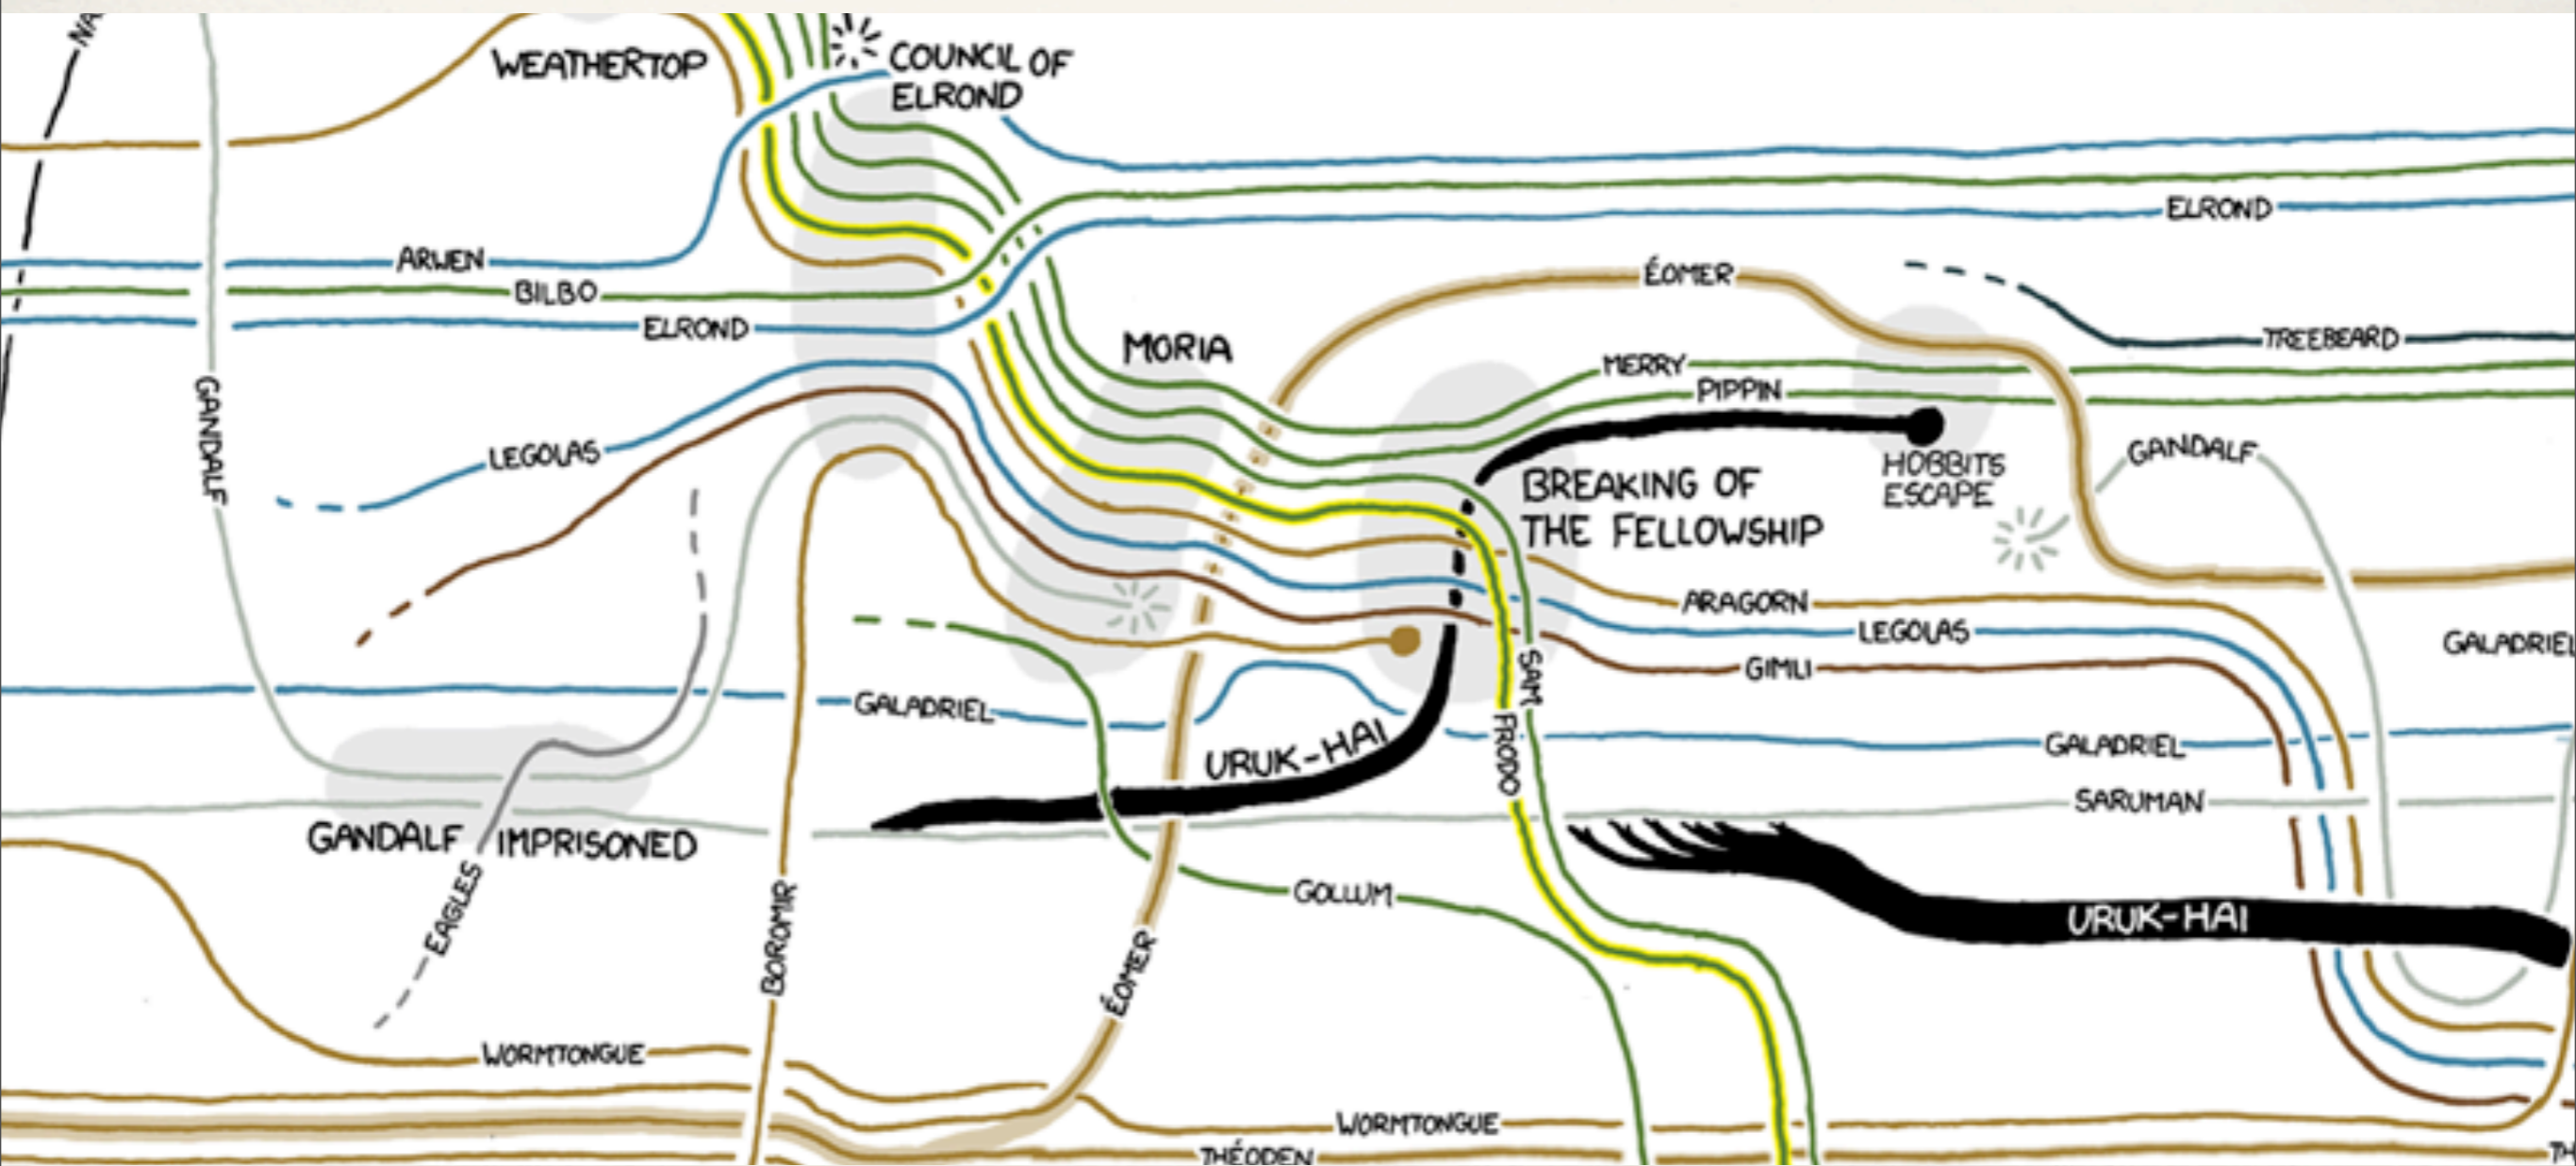

Intuitive mappings

Pick mappings that match expectations
temperature - color or height
time - horizontal axis or motion

What information do people remember?

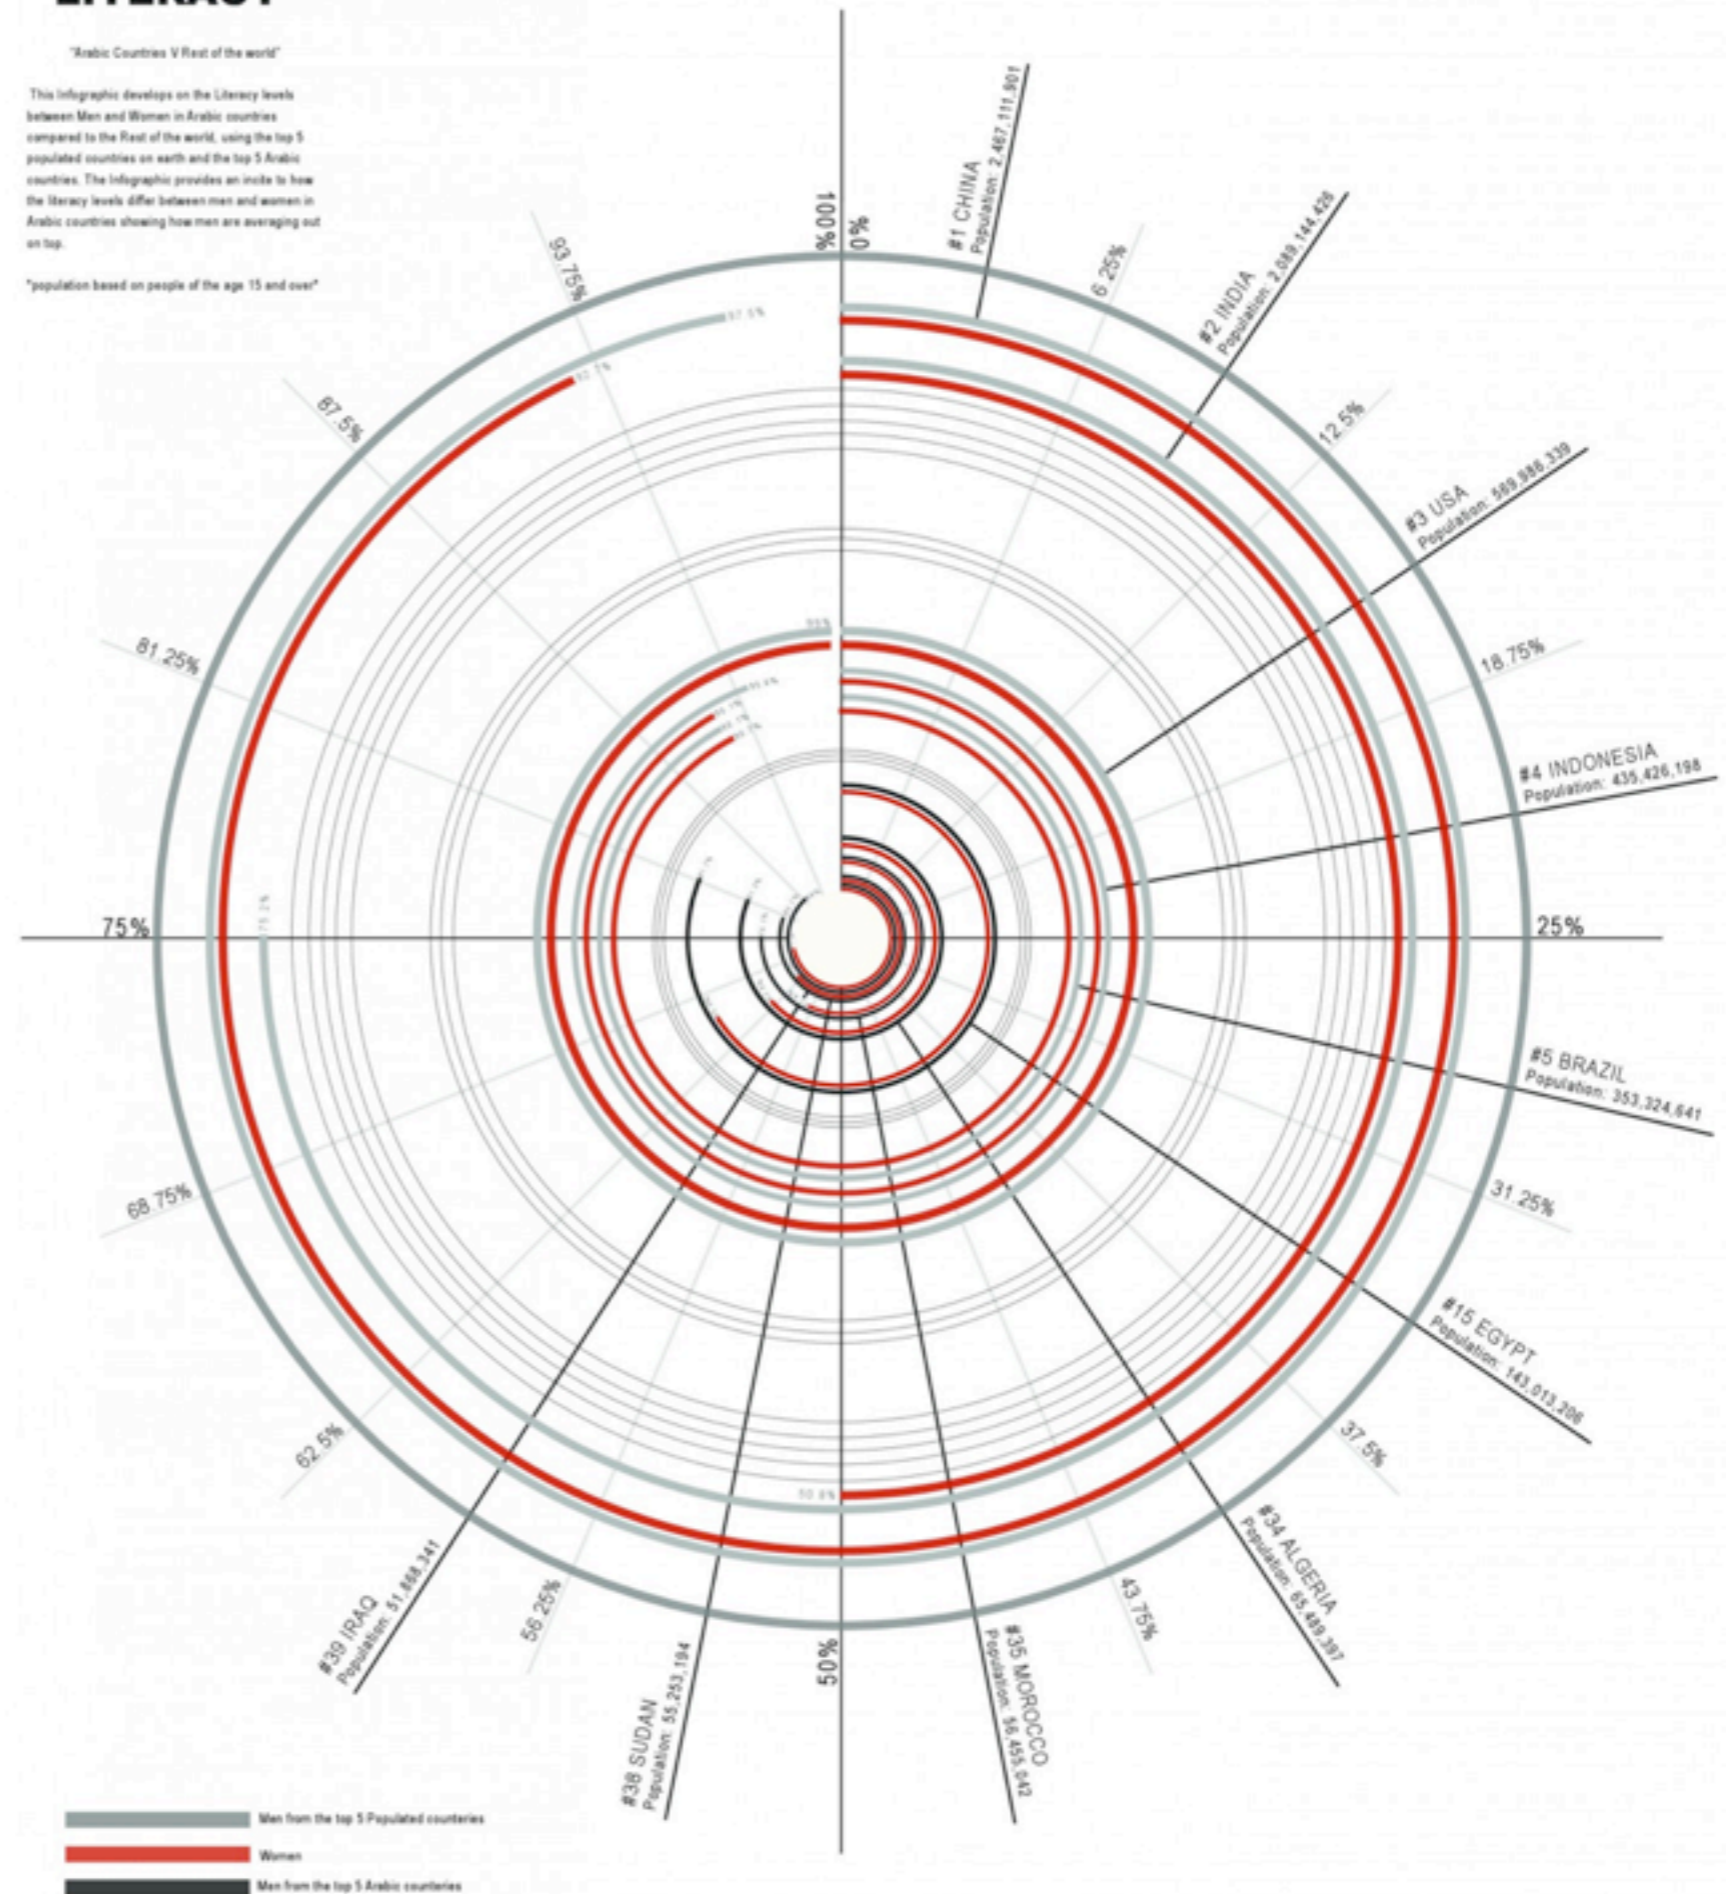

Trying to say too much?

POPULATION LITERACY

"Arabic Countries V Rest of the world"

This infographic develops on the Literacy levels between Men and Women in Arabic countries compared to the Rest of the world, using the top 5 populated countries on earth and the top 5 Arabic countries. The Infographic provides an insight to how the literacy levels differ between men and women in Arabic countries showing how men are averaging out on top.

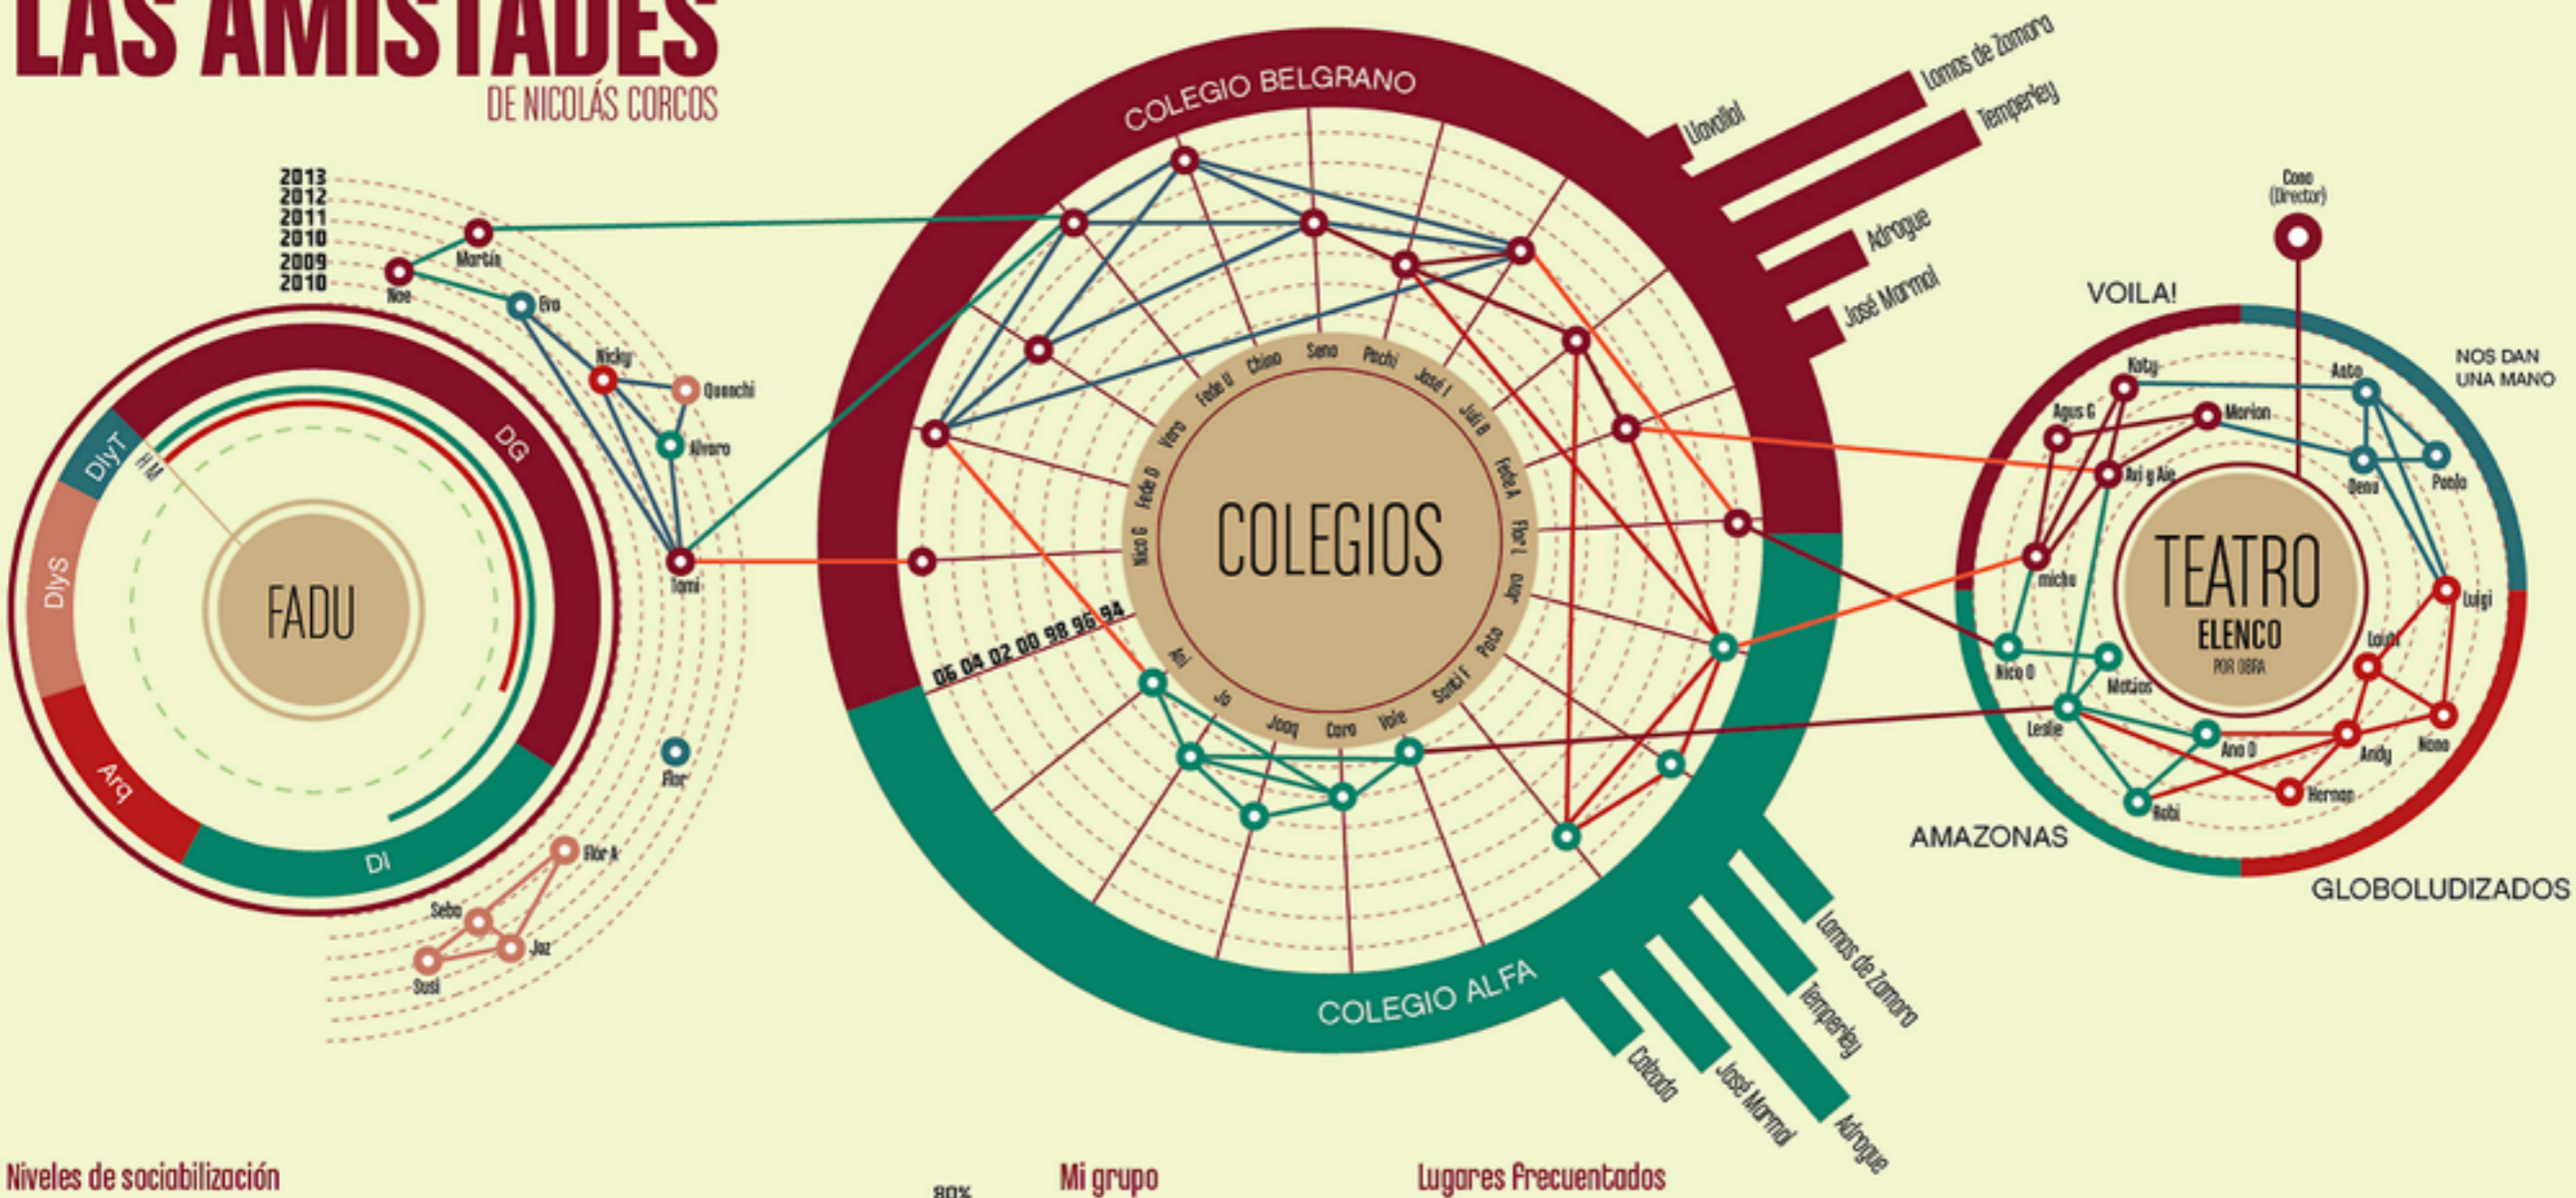

population based on people of the age 15 and over

Strong shift in opinion on abortion

A new poll found 51 percent of Americans identify themselves as "pro-life" on the issue of abortion and 42 percent as "pro-choice." It's the first time since 1995 that a majority of U.S. adults have identified themselves as pro-life.

Americans calling themselves "pro-life" or "pro-choice"

Lie factor

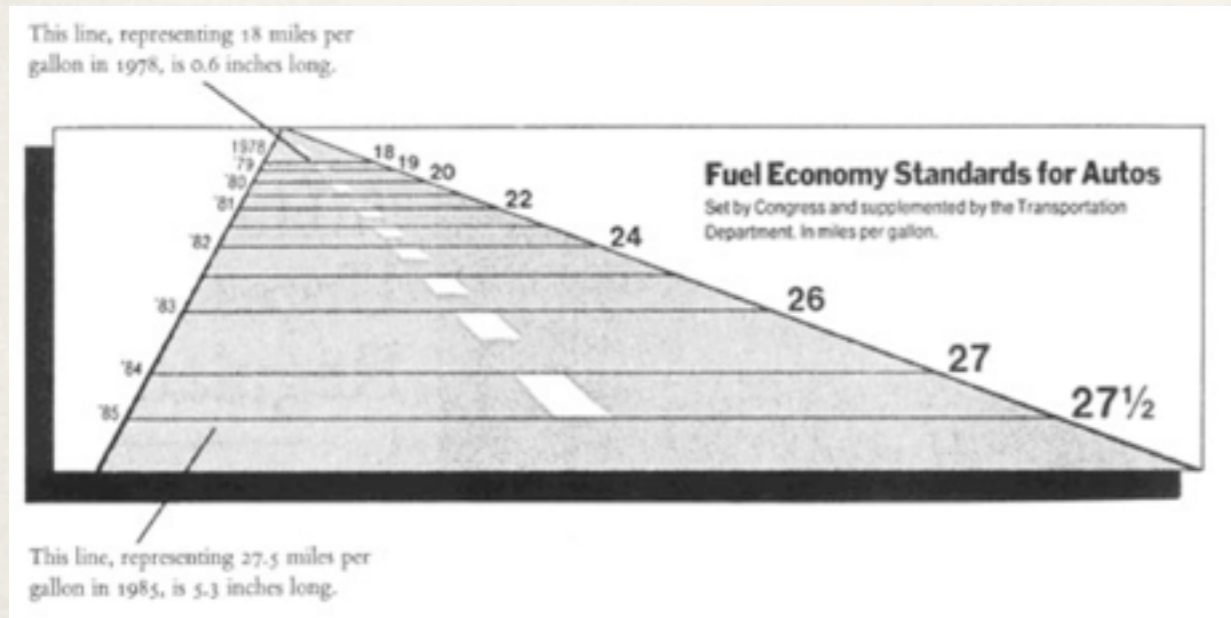

This line, representing 18 miles per gallon in 1978, is 0.6 inches long.

This line, representing 27.5 miles per gallon in 1985, is 5.3 inches long.

New York Times, August 9, 1978, p. D-2.

Lie factor

$$\text{Lie Factor} = \frac{\text{Size of effect in graphic}}{\text{Size of effect in data}}$$

$$\text{Size of effect in graphic} = \frac{5.3in - 0.6in}{0.6in} = 7.83$$

$$\text{Size of effect in data} = \frac{27.5 - 18}{18} = 0.53$$

Lie Factor = 14.8

Area and one-dimensional data

Los Angeles Times, 1979-08-05

Lie factor: 2.8

...and overlapping to make this look like it has perspective distortion

...and misleading horizontal displacement

...and one of those is a prediction

Tufte, "The Visual Display of Quantitative Data"

That is a big 4%...

Lie factor: 0.048

How to lie

Remove outliers until you have visible trends

Find a fitted curve and throw away the original data

Change the scaling to make a trend appear

Change the range to only show the effect you want

Distort the scale (e.g., move the baseline so the bottom isn't at 0)

Abuse dimensionality -- use volume or area instead of length since we know that they are harder to interpret

Compare apples to oranges, mixing two different kinds of data on the same chart

Data Ink Ratio

$$\text{data-ink ratio} = \frac{\text{data-ink}}{\text{ink used in graphic}}$$

Vampire Energy

Even when household appliances are turned off, most are still using some electricity. Appliances are either in passive standby mode (the clock on the microwave is still ticking) or active standby mode (the VCR is off, but programmed to record something).

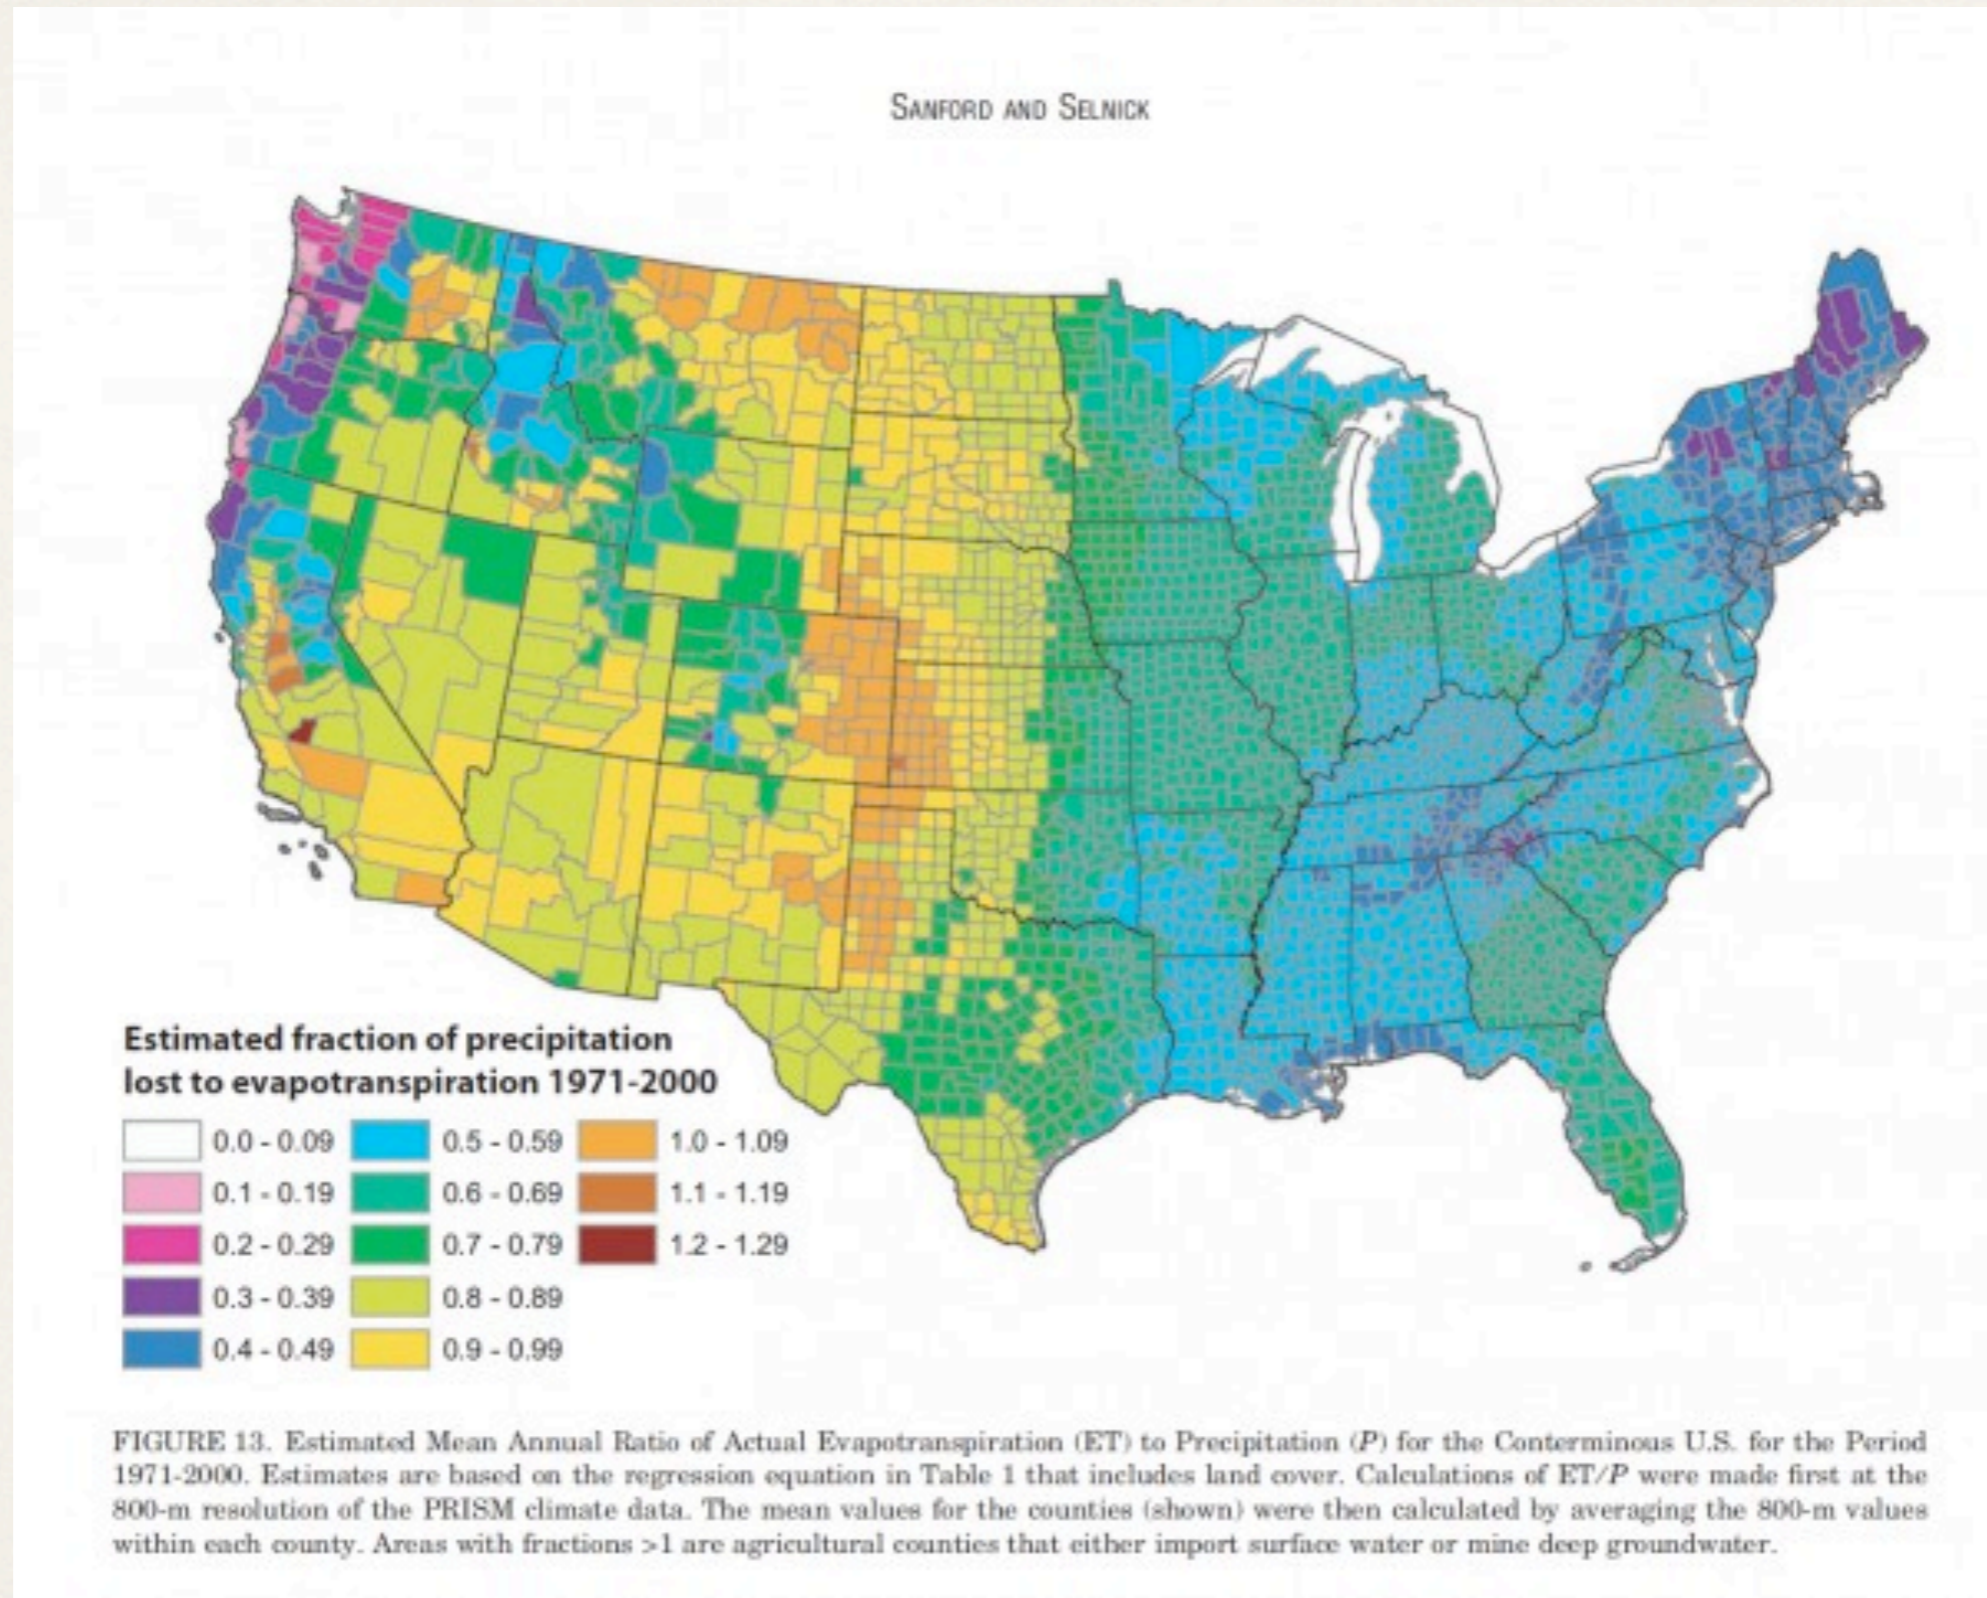

These numbers are for average standby modes, showing how much electricity is sucked out annually, in kilowatt hours, and what it costs you—assuming 11 cents per kilowatt hour. **Red lines** show passive standby mode; **blue lines** show active standby mode.

SANFORD AND SELNICK

Estimated fraction of precipitation lost to evapotranspiration 1971-2000

FIGURE 13. Estimated Mean Annual Ratio of Actual Evapotranspiration (ET) to Precipitation (P) for the Conterminous U.S. for the Period 1971-2000. Estimates are based on the regression equation in Table 1 that includes land cover. Calculations of ET/P were made first at the 800-m resolution of the PRISM climate data. The mean values for the counties (shown) were then calculated by averaging the 800-m values within each county. Areas with fractions >1 are agricultural counties that either import surface water or mine deep groundwater.

Adobe Kuler

The screenshot displays the Adobe Kuler web application interface. At the top, the navigation bar includes the Adobe Kuler logo, "Create", "Explore", and "My Themes" links, along with "Sign up" and "Sign in" options. Below the navigation bar, there is a "Save" button and the text "My Kuler Theme" with a pencil icon. A "Color Rule" dropdown menu is set to "Analogous". The central feature is a large, vibrant color wheel with five white handles. Below the wheel is a horizontal color palette with five color swatches: purple, blue, cyan, green, and yellow. Underneath the palette are four horizontal sliders with colored dots, and a vertical color gradient bar on the right. At the bottom, there are five color information panels, each showing RGB and HEX values for the selected colors.

Color	RGB	HEX
Purple	176, 110, 255	B06EFF
Blue	100, 152, 232	6498E8
Cyan	123, 255, 222	78FFDE
Green	124, 232, 100	7CE864
Yellow	255, 241, 85	FFF155
